HARDY GIANT CULTIVATED BLUEBERRIES

Not only does the blueberry produce big juicy berries 2 to 3 times as large as common blueberries, but it is ornamental on the lawn or in the shrubbery border and very easy to grow. The foliage is dark green, long and narrow, blossoms bell-shaped and pinkish white. During the autumn the leaves turn bronze, and during the winter months the twigs are red. The bushes will grow to the height of 8 feet.

For the best results plant on acid soil. Low muck or sand soils are usually very acid. Plant two or more plants to insure proper pollinization. If your soil is not acidity, mix the soil with old sawdust or soil from the bottom of an old wood pile. Set the plant and fill the hole with the same mixture and keep the soil moist. Write to the U. S. Department of Agriculture, Washington, D. C., for Bulletin on Cultivated Blueberries, It's FREE.

GIANT BLUEBERRIES

Just Think! Giant berries, many three-fourth of an inch across. Plump and juicy, sweet and full-flavored. Mild enough to be included in any diet. Fresh ripe berries require no sugar, canned berries very little. Ideal for freezing and very delicious for pies. Every bush is a heavy producer, four bushes in your yard will provide enough berries for pies throughout the season.

RUBEL — (Early-Midseason). The bush is upright, very vigorous, hardy and productive. Ships well. Is a producer of large size fruit, and a heavy bearer.

RANCOCAS — Midseason. It is of excellent quality, and a very good shipper. The bush does not grow quite as tall as Rubel, but it produces a lot of fruit over a long picking season.

JERSEY — Midseason to late. Bushes grow upright, fruit is extra large and firm, good quality.

PEMBERTON — Very productive of large berries, firm with slight aroma and good dessert quality. Liked because of its vigorous bush and large size berry.

WE ARE NURSERYMEN NOT DEALERS

When you order from us you are dealing direct with the growers. We are farmers, honest-to-goodness dirt farmers. We find it a pleasure to improve our methods as we go about our work satisfying our many customers.

It's our business to save you every cent we can on your nursery stock. It is also our business to send you the very best that can be grown. Another part of our business is to see that you are perfectly satisfied. We do not care how many plants you can get for a dollar, if they are not good, healthy, strong plants or if they do not reach you in good growing condition, you have not received your money's worth and you are not going to be satisfied, are you?

It is not the number of plants you get, but the quality of the plants that satisfies. Wouldn't you honestly rather have fewer choice plants for a dollar and be perfectly satisfied than to get more poor quality plants for a dollar and be bitterly disappointed? There's a mighty big difference between perfect satisfaction and bitter disappointment. When it comes to nursery stock, you can buy plants and trees at almost any price, but the stock that will produce the best results is the cheapest you can buy. It is always our aim to produce quality stock at the lowest price possible.

You are welcome to come and see us at any time, you may find us in our overalls pitching in right along with our help, but we will be more than glad to take off time to visit with you and show you around. We have no white collar men or desk engineers, everyone works at Zilke's. We live with our work, you will find our office and packing house on U. S. 12 highway, 3 miles north of Bridgman or 10 miles south of Benton Harbor, the world's largest fruit market.

IT IS EASY TO ORDER BY MAIL

Dear Friend Customer:

As this is our only salesman, we again take pleasure in coming to you with this small catalog of big nursery bargains. We again offer you the highest quality hardy northern grown stock at wholesale prices. Through these annual catalogs and your business with us we feel acquainted with you. Whether your order is for \$1.00 or \$50.00 it will receive our personal attention and you will get a square deal.

You probably will receive a great number of catalogs this spring, listing many varieties of fruit of every description, but just remember that the Zilke Nursery is offering only the best of each class, the kinds that produce the most and best crops or fruits, that thrive and show the most natural disease resistance. Every plant, tree, shrub, and bulb that we offer is State inspected and free from disease.

Varieties are an important consideration in planning either your fruit garden or your ornamental planting. Some of the old varieties are still in first rank, but many must give up their places to the newer and finer kinds. We urge you to give the new RED RICH, Jumbo and Armored Strawberries, Durham and Black Beauty Raspberries, Giant Red Grape and Paper Shelled Carpathian English Walnut a fair trial. We feel sure you will be more than pleased with the results.

Here at the Zilke Nursery we utilize every known scientific method of selection, breeding, production and protection in shipment that will insure your getting perfect plants in perfect condition, with strong, fibrous roots for quick, sure growth.

It will be our constant study in the future, as it has been in the past, to give perfect satisfaction to our old customers as well as our new ones who entrust their order with us. Our success, we feel confident, depends wholly on the satisfaction we may be able to give our customer friends.

Yours very truly,

BARTLETT

THE BEST SUMMER PEAR

There's hardly a person that doesn't know the Bartlett Pear and its qualities, as it is grown in, and is adaptable to all different climates, soils and situations. Fruit is large, golden yellow in color with a reddish blush on the sunny side. Flesh is tender and juicy, with a delicious musky aroma. Trees are vigorous, attain large size, bear young, live long, and barring frosts or freezes, they bear full crops year after year. Justly the leading commercial Pear—a leader among canning Pears. Fruit ripens early September. Prices above.

KIEFFER

One of the largest best known Pears. One of the best canning varieties and is possibly planted in more home orchards than any other variety. One of the easiest Pears to grow, less subject to blight than many varieties, strong grower, early and prolific bearer. Golden background, with a red blush. Recommended not only for the home orchard, but for the local market and roadside stands. Ripens in late October, heavy yielders. For Prices See Top of Page. Not available in the 7/16 to 9/16 size.

NEW BOSC

A popular variety, and one of the best winter varieties. Fruit of artistic long-necked shape, golden russet color, with juicy, white flesh. Can be kept in storage for use during the holidays. Trees are rather small-growing, but heavy yielders. For Prices See Top of Page.

NEW SEEDLESS PEAR

THE PEAR WITHOUT A CORE OR SEEDS

The Pear without a fault! No seeds, no core, no waste! Solid fruit all the way through. Resembles Bartlett in appearance, but ripens 10 days later, producing its crop at a time when the market is not "glutted", thereby bringing highest prices. Thrifty grower, heavy bearer, blight resistant, grows on any soil. For Prices See Top of Page. Not available in the 7/16 to 9/16 size.

It resembles Bartlett in shape with the same roughened surface and has about the same green color which mellow into a clear Bartlett yellow when fully mature. The fruit is two months later than Bartlett, very firm, and handles unusually well. Canning tests indicate that the canned product is equal to Bartlett and much better than Kieffer. The tree is a cropper. Covert bids fair to replace Kieffer for canning and for export. Considered one of the very best of the Black Sweet Cherries. Delicious to eat, fresh and canned and very attractive. Fruit grows in large clusters. Keeps well and is an excellent shipper. In size it is very large, usually unsurpassed by any black sweet cherry. Bears fruit very young, hardy and a sure cropper. We recommend this variety very highly. For prices see top of page.

WINDSOR—One of the best quality dark cherries, often referred to as Black Oxhart. Has pinkish flesh and almost black skin. Large, juicy and firm. Delicious to eat, fresh and wonderful for canning. Used extensively for fancy preserving. Tree grows upright and is a rapid and vigorous grower. A good variety. PRICED ABOVE.

NAPOLEON (Royal Ann)—Of fine appearance and very largest size. Color yellow and amber, with bright red blush; flesh firm, juicy and delicious. Profitable for market, finding a ready sale, for canning and dessert. Ripens in July. For Prices See Top of Page.

NOIR DE GUBEN—This variety has been grown in Europe for many years, it is a reddish black cherry of good size, crops abundantly. The flesh is firm, juicy, very sweet and aromatic. It is a cherry of the Schmidt's type, a little earlier in season. The tree is vigorous, thrifty grower, healthy, and productive. It is a choicely good cherry for home and roadside trade. 2 yr. 4 to 5 ft. trees, \$2.15 each; 3 for \$5.85. Jumbo size trees \$3.15 each.

SCHRECKEN BIGGAREAU—It is a large heart-shaped glossy black cherry, handsome in appearance. The flesh is melting but firmer than the early-ripening sweets, moderately sweet, and full of aromatic dark-colored juice. Ripens with Black Tartarian but is much larger in size and firmer flesh makes this variety much more valuable than Tartarian. The tree is vigorous and productive. Strong 2 to 3 foot trees \$1.50 each; 3 for \$4.05. Heavy 3 to 4 foot trees \$2.00 each; 3 for \$5.55.

NEW NOBLE—A dark-colored firm fleshed sweet cherry for market and home use. The fruit is large, heart-shaped, slightly flattened at the apex, dark purplish red, firm fleshed, and of very high quality, and seems to crack less than those of the late sweet varieties. We recommend this variety very highly as a choice late sweet cherry. Strong 4 to 5 foot trees, \$1.50 each.

For Prices See Top of Page.

EMPEROR FRANCIS—This large new high-quality cherry is of the Napoleon type. The cherries have been less subject to cracking than those of Napoleon. The color of the two fruits are similar, except that those of Emperor Francis are a little redder and become darker. DWARF FRUIT TREES

DWARF FRUIT TREES BEAR FULL SIZE FRUIT

The Dwarf Fruit Trees are especially adapted to the city or suburban home, where large-spreading standard size fruit trees are not wanted. They may be worked into the landscape planting wherever you would like to use a flowering tree, or they may be planted in the lawn. These are the true dwarf trees that you have been reading about in the leading magazines. Trees are budded on special roots so that they will never grow very large or tall. They are extremely decorative, especially at spring blooming time, can be pruned to desired height and shape. A beautiful sight in the spring, when aglow with blooms. These trees are dwarf in size only, they will bear full size fruit in great abundance.

GENUINE DWARF APPLE TREES

32 to 42 inch trees, \$2.35 each; 3 for \$6.00

RED JONATHAN—Bright, solid red. Flesh white, sometimes tinted with red; firm, crisp and tender—a splendid family sort and highly profitable for market.

DOUBLE RED DELICIOUS—The fruits are large, flesh fine grained, crisp, juicy, melting and really delicious. Tree hardy and a vigorous grower.

YELLOW DELICIOUS—Very best yellow apple. Waxy golden color. Luscious flavor, finest in the world. Bears fruit very young.

YELLOW TRANSPARENT—One of the very best early, yellow apples.

MC INTOSH—Fruit is large and has a good red color. Good for fresh fruit or cooking.

DWARF OKA CHERRY

NEWEST AND BEST DARK, LUSCIOUS, WINE-RED FLESH CHERRY

The flesh color is a rich, intense purplish black red. It is in all a very remarkable fruit to look at and surely a delight to eat. Jelly and jam made from Oka Cherries are as deliciously sweet as they are beautiful to look at. The tree of Oka has a dwarf bushy habit and bears from the ground up. This remarkable feature is of unique value when harvesting the fruit. No need for a stepladder for all the fruit is within easy reach.

But the dwarf size in no way indicates the size of the crop of cherries, for the strength of the plant goes into fruit production and not into surplus tree growth, and so consequently the limbs and branches burden themselves with fruit. Leaves are small, sort of a pointed oval shape, and a bright, shiny green color. Plant 2

Dwarf Oka Cherry

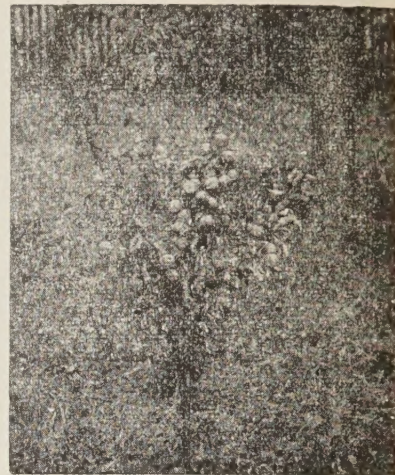

trees for perfect pollinization. 2 yr. trees, 3 to 4 ft. tall, \$1.65 each; 2 for \$3.10.

DWARF BUSH CHERRY

ORNAMENTAL SHRUB - VALUABLE FRUIT

Shapely, ornamental shrub, with long pointed gray-green leaves, silvery beneath. Covered with snow-white flowers in Spring. Cherries are in large clusters, easy to pick. Makes excellent jelly, jam and juice. The bushes reach a height of four to five feet and are perfectly hardy everywhere. Produces an enormous bush in your garden or along the edge of your yard. You will find them beautiful and enjoyable. Bearing age plants \$1.25 each; 2 for \$2.25.

A good pollinizer for OKA Cherry, Hansen BUSH Cherry, Opata Cherry and SAPA Plum. 2 yr. trees, 3 to 4 ft. tall, \$1.65 each; 2 for \$3.10.

DWARF SAPA PLUM

MOST BEAUTIFUL COLOR

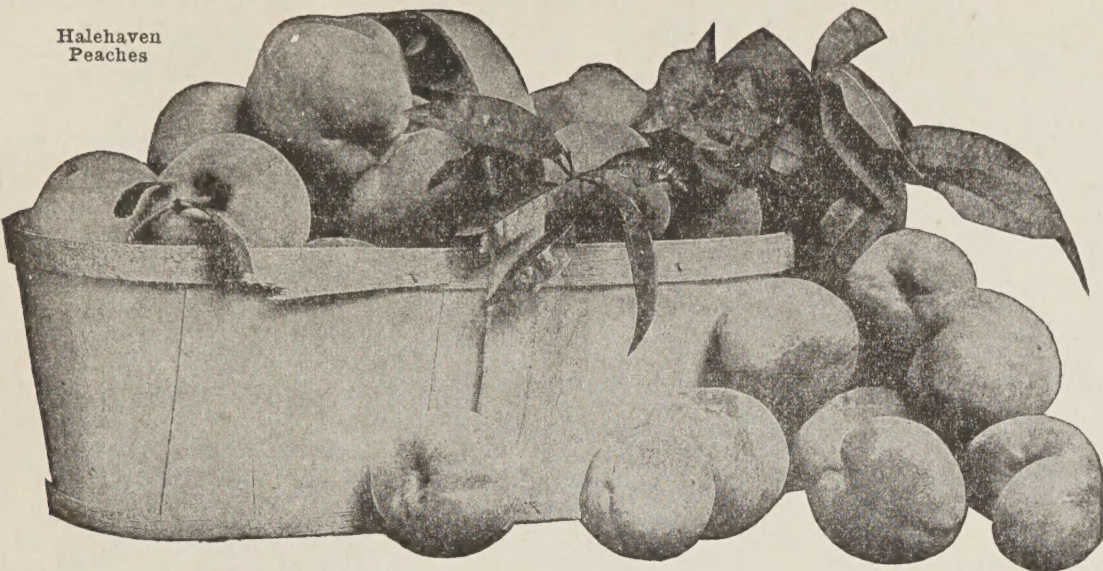

Dwarf Sapa Plum

Sapa fruit is dark purple outside and rich wine-red inside. It is a large sized hybrid plum with small pit and very richly flavored. Trees often produce blooms in the nursery row, should be grown in bush form and pruned severely to encourage growth of new shoots that will fruit heavily and regularly. Sapa is planted very heavily in the northwest because they can take the severe and cold winters with flying colors. 2 yr. trees, 3 to 4 ft. tall, \$1.65 each; 2 for \$3.10.

HALEHAVEN

BEST YELLOW FREESTONE

Truly a marvel among Peaches. Second only to Elberta in popular demand. A cross between J. H. Hale and South Haven. Colors on the tree to a rich orange over-spread with red, before ripening. Combines the large size and firmness of Hale with the perfect fertility of South Haven. Freestone. Ripens about two weeks earlier than Elberta. Trees grow rapidly, bear young, producing heavily, never failed a crop.

Very Hardy and the Best Yellow Freestone Peach We Have Ever Seen. You Make no Mistake When You Plant Halehaven.

ELBERTA

THE MONEY MAKER

There is no other peach which has ever attained the popularity of this variety. It is planted from the south to the north, from the east to the west, where a commercial peach is desired. It is probably too well known for any lengthy description. However, it is roundish in shape, golden yellow skin with a slightly red blush on the cheek. It is very thickly skinned, which gives it its shipping qualities. It is a freestone and a self-pollinizer. Enormous producer.

REDHAVEN

EARLIEST, DAZZLING ALL-RED SELF-POLLINIZING PEACH. QUALITY UNSURPASSED

Redhaven matures very early, about a month before Elberta. Fruit medium in size, of slightly elongated shape, and almost completely covered with a brilliant red color. Skin is smooth and tough. Flesh yellow, firm, fine textured, sweet, and of good quality. A perfectly fertile variety and freestone. It is safe to classify Redhaven as the outstanding early peach of tomorrow. Be the first in your locality to possess this rare and most profitable variety.

NEW FAIRHAVEN

The season of maturity of Fairhaven is about a week before Halehaven or the finish of Golden Jubilee. The original tree has produced heavy crops of fruit since 1939 at the South Haven Experimental Station, fruit buds are fully as hardy as Halehaven. Fairhaven has the same tendency for heavy fruit setting as Halehaven and Redhaven, but produces fruits of larger size than these two varieties under heavily loaded conditions, is very dependable. Fruits of Fairhaven are good size, nearly round, and mostly bright gold in color, with an attractive bright red cheek. The skin is smooth and very tough. The golden color becomes bright while the fruit is still firm. The fruits are very firm and ship exceptionally well for an early peach. The flesh is medium-yellow with a moderate amount of red color at the pit, moderately fine-textured and of good flavor. It resists browning, which is a great advantage, especially in processing. FREESTONE. For prices see bottom of page.

DWARF HARDY BOXWOOD

Hansen Apricot

NEW HANSEN APRICOT

THE SUPER HARDY APRICOT

Hansen's new sensational Northwest hardy apricot. Recently introduced by Prof. N. E. Hansen, of South Dakota State College, who has been working for many years to produce hardy apricots that would be good eating and large size and still would withstand the rigors of Dakota's cold and drought. Two very important points of interest stand out in regard to these new apricots. One is that they are perhaps one of the most drought resistant of all trees, coming through the terrible droughts of 1933, 1934, and 1935 with flying colors—full foliage and no apparent effect whatever from the dry, hot weather, and with a great crop of fruit. The second point is that they are hardy almost anywhere in America, standing and bearing well in climates getting as low as 50 and 60 below zero. Prices: 2 to 3 foot \$1.00 each; 3 to 4 foot \$1.35 each; 4 to 5 foot trees \$1.85 each.

ORANGE QUINCE

Sometimes called Apple Quince. Fruit large, round with a short neck; color bright yellow; flesh tender, juicy and of excellent flavor. Highly regarded for jellies and preserves. Trees bear young. A good tree to plant on hillsides or where land is hard to work, as it requires very little care. Heavy transplanted 3 to 4 foot trees, \$1.75 each.

PERSIMMON TREES

Trees are thrifty growers, will bear fruit in several years. Grows into a small tree, makes a very beautiful and valuable ornamental tree for the garden, street or lawn. Persimmon

Do this in the fall before frosts, remove protection in the spring after danger of frost is over. THESE TREES ARE GROWN FOR US IN
NORTHERN MICHIGAN

This Hardy tree is growing in many parts of the world; the hardiest is found in Russia, Poland and Northern Carpathian mountains where the winter temperature at times drops to more than 40 degrees below zero.

It was from these countries that the original stock was brought to Canada about 20 years ago, and since then has been propagated in Michigan.

The trees have a gray colored skin, leaves are large, glossy and nicely scented. Nuts vary in size from that of the California English walnut to twice this size. Nuts fall free of hull. The shell is thin and breaks very easy. In Canada this variety is a heavy producer, grows rapidly, bears at an early age.

CHINESE BLIGHT RESISTANT CHESTNUT

GROWING YOUR OWN LARGE, SWEET CHEST-
NUTS IS A PLEASURE

A number of years ago the Chestnut blight destroyed the Native American Chestnuts. The U. S. Dept. of Agriculture—after many tests—introduced a type of Chinese Chestnut not only blight-resistant, but an early-bearer of large, good quality nuts. Trees start bearing when very young, often in 2 to 5 years, and succeed anywhere the American Sweet Chestnut formerly grew; in fact they can be grown over a wider area and may be grown wherever Peaches thrive. We recommend planting in a well-drained, sunny location. Plant the Chinese Chestnut for attractive home ground shade trees and also reap a harvest of delicious, sweet nuts.

HARVEST FIRST CROP NEXT YEAR!**

For this year we offer this wonderful new variety from the market gardens of California—where only the best is grown. Again we predict that within a very short time Paradise will have supplanted all other kinds, and will be the standard market and commercial variety in all sections. The opportunities for a quick profit from Paradise are now freater than ever before. With America calling for increased production of all food stuffs, canners are demanding greater and greater supplies. ZILKE'S BLACK RASPBERRIES

Cumberland Black Raspberry

CUMBERLAND

THE BEST MIDSEASON BLACKCAP

The Breadwinner of the Blackcap Family! The largest of all Blackcaps and the very best midseason kind. No Blackcap has ever been grown as extensively as Cumberland, nor attained its great popularity in all Raspberry producing sections of the country. We strongly urge all of our customers to plant this dependable old favorite instead of spending time and money on new and untried varieties in which we, ourselves, have no confidence.

Fruit is large, plump and juicy, with a true "Blackcap Flavor" all its own. Free from seediness and crumbling, with extremely firm texture, which makes Cumberland an ideal shipper. EVERBEARING BLACKBERRIES

But have you ever heard of EVERBEARING BLACK RASPBERRIES? Well it's here now, ZILKE'S HAVE IT, and it's really a BLACK BEAUTY.

The Black Beauty Everbearing Raspberry ripens early, it starts to ripen with the well known Early Logan variety, after the summer crop is picked. Black Beauty begins producing on the tips of the new canes and side branches. Black Beauty not only has fruit on the tips of the new wood, it develops side branches, which are also helps in extending the fruiting season. Black Beauty starts with the earliest black raspberry and from there on in until fall or freezing weather it has ripe berries, green berries and blossoms all at the same time.

BLACK BEAUTY IS VERY HARDY

This new Black raspberry was found in the high altitude of West Virginia. Its origin at this high altitude would assure its being winter hardy and capable of thriving throughout the northern part of our country. We have fruited Black Beauty in the state of Michigan for the last four years, without winter injury to the plant or the crop.

NEW "MORaine" LOCUST

Plant Pat. No. 836

THORNLESS, SEEDLESS, HARD WOOD,
FAST GROWING, LONG LIVED

America's Great New Shade Tree

The perfect answer to the demand for a clean, fast-growing, long-lived shade tree.

The MORaine LOCUST is a round headed tree when young but tall and vase-shaped when older. Mature trees attain a height of 80 to 100 feet with lower branches high enough to clear a two story house. This feature permits planting the tree closer to the house than is the case with most other trees. Leaflets are small and in the fall they drift in between the grass blades on the lawn making very little raking or clean up. Very little pruning is needed as the lower limbs self prune as the tree grows. Tests show this new tree to grow more rapidly than either Silver Maple or Chinese Elm. It withstands drought and heat and cold. Thrives under adverse city conditions as well as on the plains where rainfall is slight. Excellent for either lawn or street planting. One of the best new tree introductions for American homes. GOOD 5 to 6 Ft. TREES, \$5.00; transplanted heavy rooted well branched trees, \$6.00 each.

EVERY MAN'S ORCHID

HANSEN'S NEW SHILKA EVERBLOOMING ORCHID IRIS

From the wilds of Siberia, near the town of Shilka, comes this new, hardy, Everblooming Orchid Iris, which was brought to this country by Carl A. Hansen from one of his world-wide plant exploration expeditions.

A real hardy outdoor perennial for the Northwest. It blooms continuously for six to eight weeks after all other Irises are gone. Its wide, spreading blooms possess lovely, delicate tones of superb orchid and blue, mingled with creamy white as found in the finest orchids.

With this latest addition to the Iris family, it is now possible for everyone to have flowers growing in their own gardens, so like the expensive orchids. Long slender stems bear as many as twelve to fifteen superbly beautiful flowers on each plant, all at one time, hundreds before the season is over.

The flowers of the new Shilka are delicately fragrant, a remarkable attribute to an already beautiful flower. Many of the blossoms come double.

The foliage, like other Irises, is attractive all through the season, in beds or in border plantings.

Everyone who likes Irises should plant this newest and finest, Shilka Iris.

The "Miracle Plant Food"

Ra-Pid-Gro

A complete, quickly available, easily prepared plant food by merely adding one pound of RA-PID-GRO to 22 gallons of water

WHAT IS A RA-PID-GRO?

RA-PID-GRO is a complete concentrated plant food formula. Easily made into an immediately effective liquid fertilizer by simply adding water. It will speed up growth of plants now in place and will assure more successful transplanting of new plants.

HOW IS IT USED?

RA-PID-GRO is so easily prepared for use. Just add water at the rate of 1 lb. of RA-PID-GRO to 22 gallons of water. Allow to dissolve and it's ready for use. Apply around each plant according to directions on the bag. For use on small numbers of plants mix at the rate of a teaspoonful to the quart of water. Also very valuable for use when transplanting. Dip plants in solution for 3 or 4 minutes, then set in place and water with remainder of liquid. Practically eliminates losses.

WHAT WILL IT DO?

RA-PID-GRO will work almost unbelievable miracles in promoting rapid and healthy growth on all types of plants. Use it on lawns, around shade trees, evergreens, shrubs, roses, perennials, vegetables and house plants. Many times plants which have been given up for dead will respond to applications of RA-PID-GRO. All the vital plant food elements are present in this remarkable discovery and since it is applied in liquid form, are readily available to the roots of the plant.

HOW DOES ITS COST COMPARE WITH OTHER FERTILIZERS?

RA-PID-GRO is less expensive than other fertilizers. In the larger quantities it makes your fertilizer cost about ½ cent per pound as against a cost of about 3 cents per pound for average fertilizers. Remember, 1 pound of RA-PID-GRO makes 176 pounds of rich and complete plant food.
